# SET VISIBILITY FOR GROUP SETS

Adding to the current functionality of Group Sets, the next phase of work on course groups provides faculty an option to change the visibility for custom or randomly created group sets. A new choice to hide course groups from the students' view gives instructors the option to use groups to discretely organize students based on their performance, interests, adopted knowledge, or other criteria.

Instructors may also change the visibility option preferred for each group set from the **course groups** page when creating a group set.

1

Instructors can see the visibility status of group sets when applying filters in the Gradebook grid view, setting up conditional release, and associating a group set to content such as an assessment or discussion.

To ensure that faculty maintain the appropriate interaction among students, the self-enrollment option will be automatically set as disabled when any course group's visibility is set to "hidden from students". And content association will always be possible when course group's visibility is available to students.
